## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of Group I, claims 1-29 in Paper No. 4 is acknowledged.
2. Claims 30-65 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 4.
3. Applicant requested the cancellation of the nonelected claims. This request must be put in the form of an amendment.

### ***Drawings***

4. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 and 7 contain trademarks/trade names. Where a trademark or trade name is used in a claim as a limitation to identify or describe a particular material or product, the claim does not comply with the requirements of 35 U.S.C. 112, second paragraph. See *Ex parte Simpson*, 218 USPQ 1020 (Bd. App. 1982). The claim scope is uncertain since the trademark or trade name cannot be used properly to identify any particular material or product. A trademark or trade name is used to identify a source of goods, and not the goods themselves. Thus, a trademark or trade name does not identify or describe the goods associated with the trademark or trade name. In the present case, the trademark/trade name is used to identify/describe materials and, accordingly, the identification/description is indefinite.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a

Art Unit: 1756

whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uzoh (US Patent 6,140,234) in view of Lopatin (US Patent 6,368,954).

Uzoh teaches a process of forming a pattern in an insulating layer in column 3, lines 28-47. An insulating layer which is 2000 to 30,000 Å thick (column 3, lines 36-38) is patterned to form the pattern. A layer of tantalum nitride 4 is deposited followed by a seed layer 6. The conductive metal 8 copper is applied to form the contact.

Uzoh does not teach the atomic deposition of the barrier layer. This is taught by Lopatin.

Lopatin teaches a process of forming a copper interconnect. Column 4, lines 3-53 and Figures 1, 4 and 5 show the process. A barrier layer 401 is applied by atomic layer deposition. Column 5, lines 34-39 teach that the advantage of the atomic layer deposition is that the layer is conformal thus providing excellent step coverage and there is excellent adhesion to the lower layer. After the barrier layer is applied, a seed layer and the copper (step 110) is applied.

Therefore, it would have been obvious to one of ordinary skill in the art to have formed a copper interconnect using a barrier layer formed by atomic

Art Unit: 1756

layer deposition because Lopatin teaches that such a layer has excellent coverage and adhesion.
